

PRESS RELEASE

9th June 2017, Brussels

ERFA welcomes the European Commission’s Mobility Package as an important opportunity to foster a more competitive, cleaner and safer transport system.

Today the transport sector still accounts for 25% of total EU greenhouse gas (GHG) emissions. This figure is dramatically and constantly growing, driven by the road sector, which accounts for 21% of total GHG emissions in Europe¹. The Mobility package is an important step forward in creating the right price signals and conditions for customers to choose the most sustainable modes of transport.

ERFA, representing rail new entrants, wants to attract new and more customers to eco-friendly rail. However, rail’s ability to grow is held back by both cost and quality issues.

ERFA therefore welcomes the European Commission’s revision of the Eurovignette Directive as a way of addressing the different charging policies for rail and road, which today distort the price signals in favour of road:

		
User-pays principle	 <ul style="list-style-type: none">• Trains pay for every single kilometer of track, in line with the distance-based principle.• 100% of the European rail network is tolled.• Covers 60% infrastructure costs²	 <ul style="list-style-type: none">• Trucks’ charges are limited and fragmented: depending on Member States• 20% of motorways and main roads in Europe are tolled.• Covers 20% of road infrastructure costs³

PRESS RELEASE

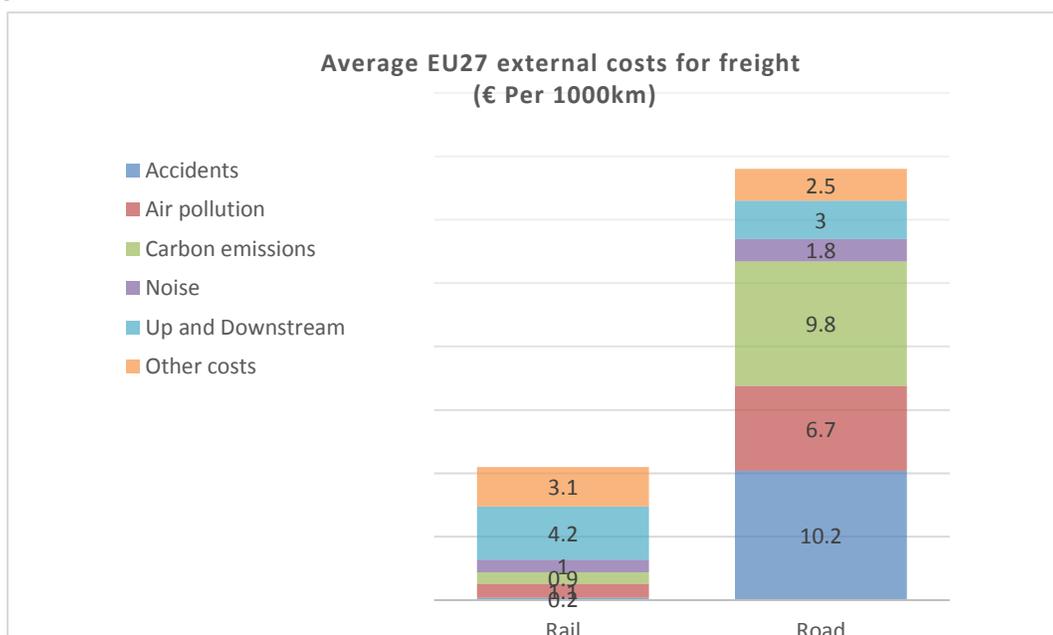

It is vital that the right price signals are put in place to better reflect the high costs created by harmful pollution, a high level of accidents and the congestion caused by the different transport modes. Today these high costs are mostly borne by society, the environment and the taxpayer. Heavy good vehicles have 3.5 times more negative impact than rail freight trains, but only pay for 30% of their externalities⁴. Including external costs in charging schemes can play a role in incentivizing transport users to adopt smarter and greener behaviours.

Hand in hand with creating a more level playing field between rail and road, ERFA is fully committed to addressing the quality and other cost issues that hold back rail's performance and attractiveness for customers. Delivering on the commitments of the rail sector statement and Ministerial Declaration of Rotterdam are key to improving the performance of the rail freight corridors; accelerating the removal of unjustified and unnecessary national rules for rail companies is also important to reducing rail's costs; and improving the efficiency, consistency and transparency of today's rail charging scheme will also help create the right conditions for a more competitive rail sector.

The on-going efforts to enhance rail's performance is part of an effective strategy to decarbonise transport.

ERFA urges Members of the European Parliament and National Governments to take the opportunity of the Mobility package to pave the way for a sustainable, fair and efficient European charging system for road in order to ensure fair competition between modes of transport and to reach the EU's ambitious climate goals.

PRESS RELEASE

Contacts: Julia Lamb Secretary General, +32 4 85 25 99 88, julia.lamb@erfarail.eu

ERFA - European Rail Freight Association - represents new entrants, i.e. all those operators who want open access and fair market conditions, and sustains their role of pushing forward the development of the railway market. The Association is very much a spin-off of the First Railway Package, adopted by the EU in 2001, and its vision of creating an open and competitive European rail market.

In 2017, ERFA represents 32 members from 16 countries. The members of ERFA all share a commitment to work towards a competitive and innovative single European railway market by promoting attractive, fair and transparent market conditions for all railway companies.

The members of ERFA represent the entire value chain of rail transportation: rail freight operators, wagon keepers, service providers, forwarders, passenger operators and national rail freight associations.
